

# **AC-ANCILLIN<sup>®</sup> AMPICILIN 100ml**

**125mg/5ml Powder for oral Suspension**

## **INTRODUCTION:**

AC-Ancillin is a broad spectrum semi-synthetic penicillin, combining bacterial activity with proven safety. It is effective against non - penicillin producing gram - negative organisms including salmonella and Shigella Species Hemophilus influenzae, proteus species, Neisseria species. Echerichea coli and other susceptible gram positive organisms like streptococcus species and penicillin sensitive streptococcus.

## **ABSORPTION AND EXCRETION:**

AC-Ancillin is relatively acid stable in gastric secretion and well absorbed following oral administration producing high serum and urine concentrations. In patients with normal renal function, higher and more prolonged levels may be achieved by the concurrent administration of probenecid.

**INDICATION:** Respiratory tract infections. Ear, Nose and Throat infections, Urinary tract infections, Enteric fever, skin and soft tissue infections.

## **DOSAGE AND ADMINISTRATION:**

as directed by the physicians.

## **PREPARATION OF THE SUSPENSION:**

To make 100ml of the suspension gradually pour boiled and cooled water up to the mark on the label invert and shake bottle until all powder is dispersed

**STORAGE:** The dry powder should be stored below 25°C the suspension should be used within 7 days of preparation and stored in a cool place, preferably in refrigerators.

**CONTRA-INDICATIONS:** Penicillin hypersensitivity

## **SIDE EFFECT:**

As with other penicillin, side effects are usually of a mild transitory nature. They may include diarrhea, indigestion or occasionally rashes, either urticarial which suggests penicillin hypersensitivity or erythematous. An erythematous rash may be caused in patients with glandular fever, in which case it is advisable to discontinue therapy.

## **COMPOSITION AND AVAILABILITY:**

**SUSPENSION:** 250mg Ampicillin as the Trihydrate B.P.  
In pack of 100ml
