

Summary of Product Characteristics (Sml)

1. NAME OF THE MEDICINAL PRODUCT

Fortified Procaine Benzylpenicillin for Injection

2.QUALITATIVE AND QUANTITATIVE COMPO

Each ampoule contains: Fortified Procaine Benzy

Inactive ingredients: None

3.PHARMACEUTICAL FORM

This product is white powder

4.CLINICAL PARTICULARS

【Chemical composition】 Fortified Procaine Benzy

5. PHARMACOLOGICAL ACTION:

This product is procaine salt of penicillin, and its ant

penicillin, Penicillin has good antibacterial activity:

as hemolytic streptococcus, Streptococcus pneumon

that do not produce penicillinase, Neisseria gonorr

Corynebacterium diphtheriae, Bacillus anthracis, Ac

Listeria, leptospira and Treponema pallidum are sus

product also has antibacterial activity against Haem

pertussis, This product has good antibacterial effect

Clostridium, Streptococcus digest and melanin prod

effect on Bacteroides fragilis. Penicillin exerts its ba

bacterial cell wall synthesis.

6.PHARMACOLOGICAL PROPERTIES

indication

Due to the low blood concentration of penicillin, its i

moderate infections caused by high penicillin levels pa

by group A streptococcus, scarlet fever, meningitis, i

pneumonia, furuncle caused by penicillin-sensitive i

This product can still be used to treat leptospirosis, i

syphilis.
